090-041-0409

Bang Wa, Bangkok 10160

Frontend Developer specializing in building modern, high-performance web applications using React and Next.js. Experienced in developing real-time dashboards, integrating APIs, and handling dynamic data with a strong focus on performance and user experience. Capable of working across both frontend and backend systems, including Node.js, Express, and Prisma, allowing efficient communication between systems and scalable architecture design. Passionate about clean UI, maintainable code, and continuous improvement in web technologies.

## Experience

### Nanobot Trader

Mar 2024 - Present

Frontend Developer

- Develop real-time crypto trading dashboard using React and WebSocket
- Integrated trading bot APIs and displayed live performance metrics
- Designed responsive and user-friendly interfaces for monitoring trading data
- Worked closely with backend systems to manage API and data flow

### 54 Niwat Auto Car

Mar 2021 - Sep 2023

Marketing Associate

Side Project: Internal Web Application for Car information

- Independently built a web application to reduce repetitive manual inquiries from sales team
- Developed car information system with search functionality (plate number, brand, model)
- Implemented Excel upload system for bulk data handling
- Built search functionality for vehicle information
- Develop authentication and access control system
- Built backend services using Express.js and Prisma ORM
